Plow Fold Station

More production possibilities

Upgrades to increase the production possibilities of our customers.

Newspaper printing is undergoing changes. As far as production possibilities are concerned, it has not only caught up with magazine printing but in some respects even gone past it. Advertisers are no longer satisfied with simply placing their ads in the best possible position on a page: they want greater advertising effectiveness.

A plow fold is one way to achieve this. With a plow fold the web is shifted laterally by turner bars or "pre-folded" before it enters the former which produces a fold-out page. This offers almost unlimited possibilities to design a newspaper cover.

Double-width presses can also be equipped with a Super Panorama plow fold. This permits production of double-sided fold-out newspaper pages which have the complete newspaper width when opened.

Both possibilities offer customers high-impact newspaper ads. ■■

Advantages

- Added value through high-impact ads
- Gives the newspaper a distinctive appearance
- Integrated in the press drive system

Basic package

Plow fold station

Modules

- Cut-off register compensator
- Draw and collecting station
- Slitting and perforating device
- Turner bar unit
- Gallery

Installation and instruction time

Around 1-2 weeks depending on the installation conditions

Remarks

- To be installed in the immediate vicinity of the former
- The width of the plow-folded web must not be less than the minimum ribbon width of the folder
- A feasibility check will be made prior to order acceptance
